

IP67 Tactical PTT with built in Microphone

Part # TAC-PTT3/NP/3.5-xx

IP67 Tactical PTT with Nexus Headset Socket

Comprising of a radio connector, and heavy-duty PU cable up to an in-line Tactical PTT unit with built in microphone. The large surface button makes it easy to use. Keying is possible even with gloves, under clothing or using the elbow.

Military standard quick release NEXUS socket allows connection of various full communication headsets.

For situations when the full communication headset is not required it can be disconnected from the Nexus socket. A simple earpiece for listening can be connected to either the side 3.5mm socket, or through the Nexus socket. The internal circuits detect a receive only earpiece has been attached which activates the built in microphone circuit. The user can now PTT from the radio and speak directly into the TAC-PTT, thus operating like a conventional speaker microphone.

JUMA *communications*

For users operating a basic active listening headset without a microphone (example 02-ComTAC & OTTO RANGE headsets) we offer an adapter cable to link this into the Nexus socket of the TAC-PTT. The cable also provides a link to the Avon FM53 respirator.

There is also the option to add wireless PTT & Tone capability to the TAC-PTT3 using our WP or Picatinny PTT products.

WP or Picatinny PTT

DECLARATION of Conformity

Registration No.: STH121025225

IP degrees : IP67

The submitted products have been tested by us with the listed standards and found in compliance with the following Standards:

IEC 60529 Edition 2.1, 2001-02
