

PLANTRONICS

ENTERA™ USB

UNIFIED COMMUNICATIONS CORDED HEADSET SERIES

The right combination of value and performance.

The strong audio performance, comfort, and durability of the Entera USB headset make it ideal for enterprises transitioning to Unified Communications. The Entera USB supports wideband telephony for clear sound and employs a noise-cancelling microphone for clear voice transmission even in noisy office environments. Featuring an adjustable boom and soft ear pieces, the Entera USB is ideal for phone-intensive tasks, such as long conference calls and multimedia applications.

- **Flexible design.** Adjustable boom angle, capsule angle (front-to-back and up-and-down), and microphone-to-mouth distance maximise voice quality.
- **Robust audio.** As enterprises adopt UC and VoIP, they want to take advantage of wideband telephony to deliver natural-sounding audio and decrease listening errors and repetition.
- **Transmit performance.** Noise-cancelling microphone filters out background sounds for heightened speech clarity.
- **Choice of models.** Choose the binaural design to block out background noise or the monaural design to have the ability to confer with colleagues.
- **World-class customer service.** Enjoy the incomparable service and support you would expect from the world's premier headset supplier.
